

Teamwork Contract

Team Name:	Team CantoneseNLU	TIPS FOR EFFECTIVE TEAMWORK • Complete your Teamwork Contract at your first team meeting. • Set agendas for meetings. • Ensure clarity on your action items, timelines, deliverables, and project milestones. • Check in with your team members. • Ask questions, especially if something is unclear to you. Seek to understand. • Ask for input from your colleagues and build on each other's ideas. • Structure team meetings so that everyone has a chance to speak and participate.
Team Number:	Group 3	
Course and Section Number:	Course: 3052U Kharintirasakar Uthayanan, Shawn Xiao - 004 David Zajac - 009 Gamze Esen-Erdemir - 002 Diana Riyahi - 002	
☐ Has your team completed the Team Skills Audit form? (See below.)		
SECTION A – EXPECTATIONS, BEHAVIOURS, GROUND RULES		
Have an open, direct conversation about the kinds of expectations and behaviours that will help your team work effectively. Use the questions below as a guide to start your team discussion. To ensure a productive discussion, think about these questions in advance. You might want to practice conversation management techniques or structure your conversation using Post-It notes / a shared document to allow team members to write down their opinions. ▪ What values are important to you as a team? ▪ What grade are you aiming for as a team? How will you help each other achieve this? ▪ How will you communicate and how often? How responsive must team members be? What communication platform will you use? ▪ How will you meet as a team (in person, virtually)? How often will you schedule meetings? ▪ How will you manage file or data sharing? Which platform will you use? ▪ If a group member can't meet a deadline due to unforeseen circumstances, what should they do? ▪ What do you consider to be "late" for meetings or for internal draft submission deadlines?		

- What will you do if you are unhappy with the quality of work produced by the team or by an individual team member?
- How will you handle conflict or confrontation? Will you deal with it in the moment, or do you need space and time to reflect? If team conflict or disagreement arises, how will you address it? (Consider your personal communication style and preferences and share with your group.)
- How will you provide constructive feedback to each other? (Consider what you need from your teammates when it comes to feedback and share with your team.)

Questions adapted from Barkley et al. (2014)

Use this discussion and the column on the right below to create your team's ground rules.

Example ground rules

OUR TEAM'S GROUND RULES

- Carefully read and review content from all team members to ensure familiarity with the full assignment submission. - Meet deadlines the team has agreed on. - Provide 48-hour notice for any changes to group meetings.	Communication and sharing information: - Hold team calls and meetings using voice calls weekly - Primary channel is Discord - Assigned roles for teamwork - Regularly share code and work done with everyone in the group Github repository - Use meaningful commit messages and clear code comments/documentation - Reports, slides, notes in a shared Google Docs, Google Slides, Google Drive Meetings and deadlines: - Meetings: Monday 20:00-21:00 - Deadlines: Proposal and Contract September 18, 2026 - Deadlines: Gathering data and problem approval October 2, 2026 - Problem approval (Sept 23) - Initial Data set (Sept 25) - Data cleaning, preprocessing, and initial EDA (Sept 29) - Working Data Pipeline (October 2) - Deadlines: Baseline Reproduction October 19, 2026 - Naive Benchmark algorithm for machine learning model and baseline (October 10th) - Train baseline model(s) and create baseline result table (October 13th 2026) - Analyze discrepancies and refine baseline (October 15th) - Finalize baseline results, discrepancy analysis, and reproducibility check (October 19th) - Deadlines: Progress Presentation Oct 30, 2026 - Compile preliminary results (Oct 23) - Each group member will provide and create a slideshow with statistics on how it works - Statistics and analysis Oct 25 - Presentation formation October 29th - Full Presentation (October 30) - Deadlines: Final Experimentation analysis and Fine Tuning November 20, 2026 - Finalize model tuning plan (Nov 2) - Complete remaining model training and experiments (Nov 8) - Run repeated trials / uncertainty analysis and conduct error analysis (Nov 13) - Conduct robustness, sensitivity analysis (Nov 15) - Finalize main results table/figure and draft conclusions (Nov 18) - Final team review and check (Nov 19) - Deadlines: Final report Repository and demonstration December 4, 2026 - Complete full final report draft (Nov 25) - Repository cleanup (Nov 27) - Prepare first version of presentation (Nov 29) - Team review of report and presentation (Dec 1)
---	---

- Revise final report, slides, and repository (Dec 2)
- Final reproducibility and submission check (Dec 3)
- Deadlines: Individual Reflection and Oral Defence December 7, 2026
 - Gather personal contribution evidence and draft Individual reflection (December 5)
 - Practice oral/code walkthrough (Dec 6)
 - Oral Defence and final submission check (Dec 7)

Work distribution and quality:

- For Quality: Substantial pull requests must be reviewed by at least one other team member before merging, and major milestone changes will be reviewed by the full team
- Roles may rotate when a milestone creates an uneven workload
- Meetings and discussions to ensure that each group member knows how to perform a task
- Extensive training, fine tuning and review by group members to ensure that the model is accurate
- Code will include appropriate comments and documentation

Feedback:

- Feedback is specific, about the work, and given in PR comments or in meetings
- Instructor/TA feedback received at milestones will be discussed and incorporated where appropriate.

Miscommunications or incomplete work:

- Group members will support each other and the one who missed work will also try to make up for it
- Miscommunications will be handled through emails, commentary, discord meetings and analysis or reports
- If a member cannot complete a task on time, they should notify the group as early as possible and explain the issue
- Repeated missed deadlines, lack of communication, or work should be addressed directly as a group and if necessary, brought to the TA.

Other:

- Group members will help each other as necessary, and roles will be rotated should there be too much pressure on a group member, however group members will ultimately be responsible for their role and completing it to the best of their abilities

SECTION B – PROJECT PLAN

When you decide on team roles, consider rotating roles for each task or stage of the project. This gives all team members a chance to develop a well-rounded skill set. Common roles might include facilitator, editor, data manager, coordinator, but you can decide on your own roles based on group strengths and the goals of the assignment.

Team Member	Principal Roles
Gamze, Kharintirasakar, David	Data Lead and Progress Presentation -cleaning, EDA, train/validation/test splits, leakage checks on features, prepare presentations
Gamze, Kharintirasakar	Modelling Lead - naive benchmarks (majority-class, stratified-random); primary models: character-level TF-IDF with Multinomial Naive Bayes and L2-regularised logistic regression; committed comparison model: k-nearest neighbours on fixed multilingual sentence embeddings
Diana, Shawn	Evaluation and Analysis Lead - metric justification (macro-F1 primary; accuracy and per-class measures secondary), validation protocol and test-set lock, seeds/environment specification, variability reporting across repeated runs, the sensitivity/ablation study (learning curve), experiment log, main-result regeneration script.
Kharintirasakar	Project Coordinator -agendas, GitHub project board, milestone submissions, timeline tracking, TA/instructor liaison,
Diana/ Kharintirasakar	Communication Lead - slides, report drafting and integration, figures, demo, revision-response document

Notes on Team Roles (E.g., Will you rotate roles? Define any roles that are unclear above.)

Primary roles identify each member's main area of responsibility, but all members will review and contribute to the complete project. Roles may rotate or overlap across milestones so that every member gains experience with data preparation, modelling, training, evaluation, documentation, and presentation.

TASK ASSIGNMENT		Final Deliverable Due: [Date]	
Task	Steps Involved in Task	Task Deadline	Team Meeting Date
M1: Proposal, team contract, repo setup	Choose topic and shortlist datasets; write 2–3 p proposal (task, current practice, gap, solution, success evidence, SMART timeline); sign this contract; create private repo, board, and CONTRIBUTIONS.md / AI_USE.md stubs.	Sept 18 2026	Several meetings were held: Sep 15, 2026 Sep 17 2026 (3:30 pm) Sep 17 2026 (8:30 pm)
M2: Dataset and problem approval	Gathering initial Data (Research) Reviewing the Data and cleaning out mismatches Problem Approval Creating a Data Pipeline	Oct 2, 2026	Every Monday 8-9 pm

M3: Baseline Reproduction	Create a naive benchmark Train the classical baselines and improve them on the validation split, reporting macro-F1 as the primary metric; record seeds and the environment specification. Use validation data for model selection and tuning; reserve the final test set for final evaluation	Oct 19, 2026	Every Monday 8-9 pm
M4: Progress Presentation	Compare preliminary model results and evaluation metrics Turn this data into clear tables, figures, and graphs summarizing preliminary results Preparing a presentation with the results of the data collected The full presentation	Oct 30, 2026	Every Monday 8-9 pm
M5: Final Experimentation analysis and Fine Tuning	Review the algorithm, perform further testing to see the accuracy and see which new training data or math model will improve the algorithm	November 20, 2026	Every Monday 8-9 pm
M6: Final Report and Demonstration	Complete statistics and data from model (accuracy) Write a rough copy of the report Have the team review the report Prepare and complete the demonstration Verify that the repository can regenerate the main result and complete the final reproducibility check	Dec 4, 2026	Every Monday 8-9 pm
M7: Individual Reflection and Oral Defence	Complete a self reflection seeing what could be improved Record an oral defence Review key theoretical and experimental decisions, contribution evidence, one failure/lesson, and responsible AI use	Dec 7, 2026	Every Monday 8-9 pm

Notes on Project Management and Task / Work Plan:

For milestones that rely more on one group member work may be split amongst others and roles may be rotated, however each student will work on the milestones that are relevant to their tasks, furthermore partners will comment their code when they can

The team will meet every "" and communicate primarily through Discord. GitHub will be used for code, version control, pull requests, issues, and contribution tracking. Google Docs/Slides/Drive will be used for reports and presentations. Internal deadlines will be set before each official milestone. Workloads may be redistributed when necessary, but all members will review integrated submissions and remain responsible for understanding the complete project

SECTION C – SIGN OFF

By writing your name and student number below, each of you indicates that you agree and commit to the plan developed and ground rules contained in this Team Contract.

If you do not agree with the terms above, do not sign the contract. Instead, bring up your concerns with your team. You can also contact a Teamwork Mentor by sending an email through the course slack. Teamwork Mentors can help you and your team develop ground rules and a plan of action you can all agree to.
